## **DETAILED ACTION**

### ***Election/Restrictions***

1. The Sequence Listing and CRF submitted on March 29, 2010 have been entered.
2. However, please note that the application still fails to comply with the sequence rules.

The claims refer to sequences as represented in figures. The claims must refer to each sequence by a SEQ ID number. The claims must be amended to recite the SEQ ID numbers prior to examination on the merits.

3. The amendment filed August 15, 2006 has been entered.
4. Claims 1-18 are cancelled.
5. Claims 19-41 are pending.
6. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 19-32 and 38-41, drawn to a transgenic cell comprising a polynucleotide encoding a desaturase.

If this group is elected, then one sequence must also be elected. The claims will be examined to the extent that they read on the elected sequence.

Group II, claim(s) 33-37, drawn to a reaction vessel comprising a desaturase polypeptide.

If this group is elected, then one sequence must also be elected. The claims will be examined to the extent that they read on the elected sequence.

7. The groups of inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

1. The nucleic acid of Group I does not share a special technical feature with the polypeptide of Group II. According to the PCT Administrative Instructions, for molecules to be of similar nature, they need to share a common core structure and a common property or activity. Nor does the relationship of the polypeptides of Group II and the polynucleotides of Group I conform with Example 17 of the PCT Administrative Instructions. The instant claims are not directed to a single molecule, but encompass a family of molecules that will hybridize to a polynucleotide. For these reasons, there is no shared technical feature between the nucleic acids of Group I and the polypeptides of Group II.

In addition, applicants are reminded that nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the requirement for different searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
